

MULTIPLE HEAT PUMPS

WHY COOPERATE WITH US

- After the inquiry, we will recalculate and estimate your savings and determine the return.
- We provide a tailor-made solution for existing buildings and pools for different ranges of target water temperature throughout the year, even in winter.
- We work with drinking and thermal water.
- Sulfur and salts are not a problem.
- Heating or cooling, always as needed, the solution is functional even in cloudy or rainy weather.
- Upon agreement, we will organize a visit to the hotel / Aquapark, where the Microwell devices are already working.
- Production within 4 weeks.

WHY ARE SEVERAL GROUP HEAT PUMPS BETTER THAN ONE MAXIMUM LARGE HEAT PUMP?

- Several pieces of the most powerful heat pumps for one pool can be installed without the need to move them with a crane.
- Max weight of one unit is 90 to 120 kg/pc (not 200 to 500 kg).
- Instead of one big unit, 2 to 10 individual units.
- In the case of an outage, not 100% but only a 10 to 50% outage.
- Faster delivery and service times.
- Less demands for synchronizing assembly work with other professions (swimming pool operator, refrigerator operator, electrician, builder, transporter, crane operator, etc.).
- Lower shipping and handling and assembly costs.
- Easier maintenance, cheaper service.
- Possibility of step cascade regulation.
